Algorithms to Live By
The Computer Science of Human Decisions

ASSIGNMENT DETAILS

CACHING | EXPLORE EXPLOIT | RELAXATION | SCHEDULING | OPTIMAL STOPPING

Meet with a group of algorithm experts with the intention to exchange ideas and combine elements into a **model explanation** for a final presentation*. Everyone in the group will be presenting about the same algorithm.

Prepare your explanation of the assigned algorithm. The explanation can be supported by props. No digital aids, this is not a slide deck presentation.

30 minute meeting
5 minutes for each member to present their explanation
Take notes while others are presenting
Hold all comments/questions
10 minutes to discuss and come to a consensus about a **model explanation**

Graded elements, based on levels below.

- Content accuracy
- Clarity of speech, language, terms used appropriate for group
- Use of props to describe the algorithm
- Connections made during group discussion

Thorough and demonstrates mastery and attention to details	Meets expectations	Room for improvement	Some elements are not completed and/or are done in a minimal way
9-10	7-8	6-7	0-5

Consider

- vocabulary choices
- inclusion of meaningful ideas from chapter and exclusion of unnecessary or redundant ideas from chapter
- logical ordering within explanation
- provide elaboration to tell a story to improve understanding
- discussion comments/questions are used to guide group toward a consensus, not lead off track

*Final presentation will not be prepared or delivered.
