Algorithm Language

Algorithm notation

```
procedure
if n = 0 then return 0
else
     x := 0
     y := 1
     for i:= 1 to n - 1
          z := x + y
          x := y
          y := z
     return z

output is the nth Fibonacci number
```

Follow the algorithm
(using a set of number cards)

```
set max to 0

for each number x in a list
   compare to max

   if x is larger, set max to x

max is max value
```

Describe two different sorts from class
